

Sprint 2 Plan
FlixForum
February 1st 2023

Goal: Have a main page for users to see when visiting the webpage that has a list of icons of TV show seasons. These icons will route to a list of episodes of the season and the episodes will route to the forums of the episodes. Once users are under these forums, they should be able to post under them. The users should be able to look up TV shows that they cannot find on the home page as well.

Sprint 2 Higher Level Goals:

1. This web application should allow for people to be able to see icons for different discussion forums for TV show episodes that they can click and navigate to.
2. The user should be able to look up TV show episodes and forums, and view other people's posts.
3. Users should be able to post under the forums.

(13) User story 1: As a TV show watcher, I want to see some TV shows with forums after I log in so that I can get a preview of different shows available and navigate quickly to the chosen forums without searching.

Tasks :

1. Work with an API to access a database with Netflix TV Show episodes and get the descriptions of it as well
2. Display icons of show episodes with descriptions
3. Clicking on the icon takes the user to a new page with a forum

(21) User story 2: As a TV show watcher, I want to be able to have a platform where I can see how people feel about new TV shows so that I can find new shows that might interest me and get real feedback about the show/episodes from other people.

Tasks :

1. Figure out how to format posts under each episodes
2. Access the database in order to display all the TV shows available inside the search bar
3. Have the user being able to click on a specific episode and go to their corresponding page (don't need to display any posts yet)
4. Create a search bar to the top of the home page

(21) User story 3: As a TV show watcher, I want to be able to discuss with others about a specific TV show episode so that we can communicate our thoughts about it as we are watching it.

Tasks :

1. Create tables in database to save information about users and their posts on forums

2. Store forums with its posts and users who posted them
3. Display the posts on correct forums
4. Make a button for making a new post that opens up a modal
5. Update database accordingly when users make a new post

Team roles:

Saki Yokokawa : Developer, Scrum Master

Gavin Poley : Developer

Ryan Wang : Developer

Khin Yone : Developer, Product Owner

Julia Tober : Developer

Initial task assignment:

Saki Yokokawa : How to host the database and update to have username, update the database and design schema

Gavin Poley : Routing for home page and figuring out the search bar

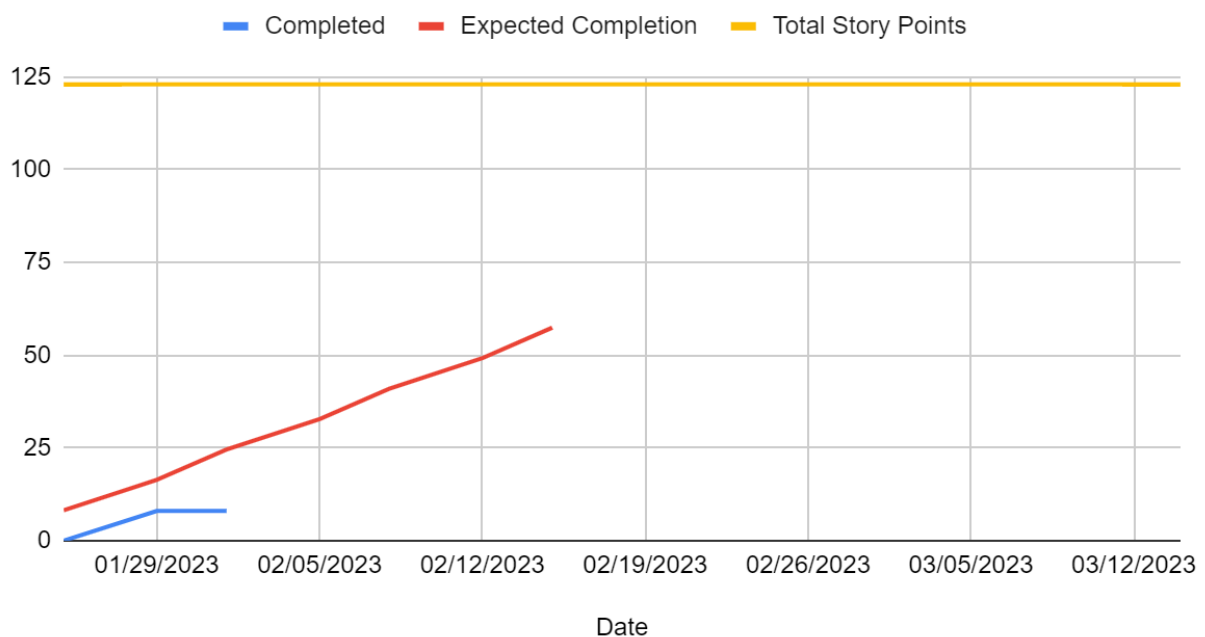

Ryan Wang : How to host the database and update to have username, design schema

Khin Yone : How to host the database, search bar

Julia Tober : How to host the database and update to have username, update the database and figure out how the schema to use

Initial BurnUp Chart:

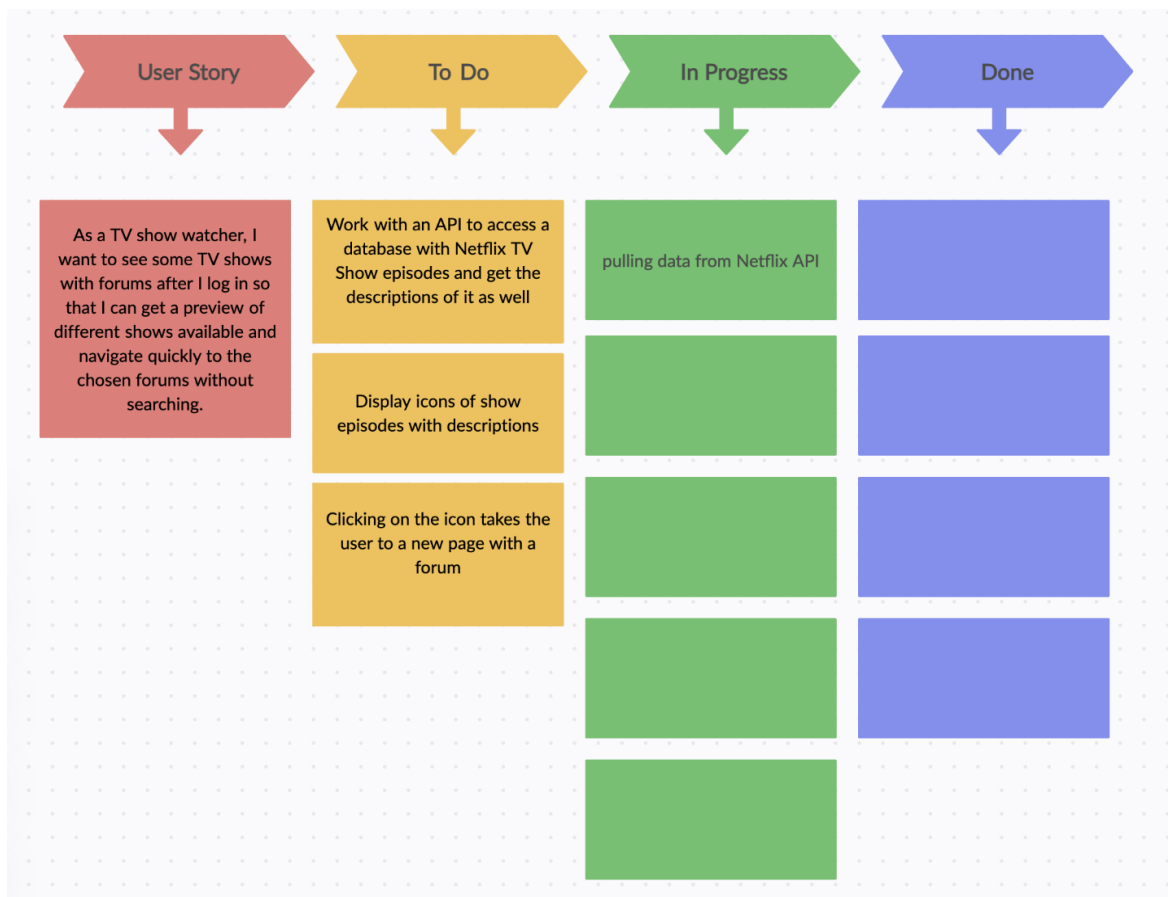

Completed, Expected Completion and Total Story Points

Scrum Times:

- Wednesday 7 pm - 8 pm
- Sunday 3 pm - 4 pm
- **Wednesday 3:00 pm - 3:45 pm (TA)**

Initial Scrum Board:

As a TV show watcher, I want to be able to discuss with others about a specific TV show episode so that we can communicate our thoughts about it as we are watching it.

Create tables in database to save information about users and their posts on forums

Store forums with it's posts and users who posted them

Display the posts on correct forums

Make a button for making a new post that opens up a modal

Update database accordingly when users make a new post
