

Testing Approach

- Console.log statements
- Testing DB connection using mySQL workbench
- Comparing data from DB and API with console.log statements

Definitions of Done

- Login Page
 - Can log in with registered email and password
- Register Page
 - Can register with username, email, and password
- Home Page
 - Has a search bar
 - Three rows of TV shows people can choose from
 - Can click on the icon of TV show to navigate to a Forum Page
 - Can login/logout
- Search Bar
 - Can look up a TV show on Netflix based on its name
 - Can click on show to get to forum page for that show
- Forum Page
 - Can select Season and Episode of the TV show
 - Can see posts under the forum
 - Can like posts under the forum
 - Can make a new post under the forum if logged in
- New Post Modal
 - Can view posts even if user is not logged in
 - Can make posts under forum only if user is logged in
 - Will deploy to the data with the new post information
 - Will display the post under the forum once the Go button is clicked
- Logo
 - Can click on the logo to navigate back to home page
- Show Cards
 - Can display the title and picture of TV show grabbed from the database
 - Clicking on the card will take user to forum page for that show and have all the seasons and episodes available to choose from a drop down menu
- Like/Dislike Button (Incomplete)
 - Users can like or dislike any number of posts as long as they are logged in and their history of likes and dislikes will be saved
 - The forum will display the total number of likes and dislikes for each post
 - The user should be able to only like/dislike the same post one time per account
